

CHINOOK MUSIC STORE SALES & CUSTOMER ANALYTICS REPORT

Project Overview

This project analyzed the Chinook Music Store database using SQL and Power BI to evaluate customer purchasing behavior, sales performance, and revenue distribution across countries.

Tools Used

- MySQL
- SQL (Joins, Aggregations, Subqueries, Window Functions)
- Power BI

Key Insights

1. Revenue Concentration

The USA generated the highest revenue among all countries, indicating that sales are heavily concentrated in one market.

2. Customer Value Distribution

A relatively small group of customers contributed a significant share of total revenue, highlighting the importance of customer retention.

3. Music Preference Trends

Sales were concentrated around a limited number of artists and genres, showing clear customer preferences.

4. Order Value

The average order value remained relatively low, suggesting opportunities to increase basket size.

Recommendations

- Strengthen customer loyalty and retention programs.
- Increase marketing efforts in high-performing regions.
- Promote top-selling artists and genres.
- Introduce bundled offers and cross-selling strategies to increase average order value.

Conclusion

The analysis revealed that revenue performance is driven primarily by specific countries, customer segments, and music categories. Targeted retention and promotional strategies can support future revenue growth.
