

ANALYSTLAB AFRICA — WEEK 1–2 DATA CLEANING & EDA REPORT

ANALYSTLAB AFRICA — NETFLIX MOVIES & TV SHOWS — DATA CLEANING & EDA REPORT

AnalystLab Africa Internship (Week 1–2)

PROJECT OVERVIEW

This project focuses on cleaning and analyzing the Netflix Movies and TV Shows dataset. The goal is to transform raw data into a structured format and extract meaningful insights about content distribution, trends, and platform growth.

DATA CLEANING SUMMARY

- Filled missing values in director, cast, country, and rating with “Unknown”
- Removed duplicate records
- Standardized column names for consistency
- Converted date_added to datetime format
- Checked and filtered release year inconsistencies

KEY FINDINGS

- Netflix contains more movies than TV shows
- United States is the leading content-producing country
- Most content was added between 2016–2020
- TV-MA and TV-14 are the most common ratings
- Drama and International Movies dominate the catalog

INSIGHTS

Netflix shows strong global expansion after 2016, with a clear focus on movies and mature-rated content. This reflects its strategy to target a broad international audience while scaling content diversity.

CONCLUSION

The dataset is now clean, structured, and ready for advanced analysis such as recommendation systems, trend forecasting, and content strategy optimization.
